# Encouraging Innovation in Medical School Education

# The Arts and Humanities in Medicine

## Focusing on Arts, Humanities to Develop Well-Rounded Physicians

Learning about history, visual and performing arts, and literature can help physicians develop empathy and professionalism—skills that will lead to deeper connections with patients.

# Improving the Transition to Residency

# New Data for Residency Applicants

Point of Diminishing Returns for Entering an Internal Medicine Residency Program for U.S. MD Applicants

1. Number of Applicants = 27,219; this analysis included U.S. MD applicants only.
2. The point of diminishing returns is the point at which the value added by submitting one additional application is reduced relative to the value added by each application before reaching the point of diminishing returns. The addition of one application beyond this point results in a lower rate of return on an applicant's likelihood of entering a residency program.
3. The point of diminishing returns is an estimate and is not perfectly precise. Therefore, confidence bands around the point of diminishing returns are provided. The lower and upper bounds of each confidence band are shown (a) below the point of diminishing returns in the circle and (b) by the shading around the vertical lines. The width of the confidence band describes the precision of the estimate, with wider bands indicating less precision.
